The following is an examiner's statement of reasons for allowance: The instant application claims N-(4-Bromo-2-methylphenyl)butanamide which is an intermediate in applicants' process for making N-butyryl-4-amino-3-methyl-methylbenzoate which are useful in making pharmaceutical angio-tensin II antagonists. Japanese patent document 41-1784, cited as state of the art only, discloses the close compound 2'-bromo-p-propionotoluidide, but it is stated to be useful as a plant growth regulator which is a non-analogous art area. Applicants' process, patented in the parent application, using N-(4-Bromo-2-methylphenyl)butanamide as an intermediate is able to produce N-butyryl-4-amino-3-methyl-methylbenzoate in unexpectedly high yield.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
